1.5 MHz, 600mA Synchronous Step-Down Converter with Low Quiescent Current

GENERAL DESCRIPTION

The APS1016 is a 1.5 MHz constant frequency, high efficiency, slope compensated current mode PWM step-down converter. The device integrates a main switch and a synchronous rectifier for high efficiency without an external Schottky diode. The APS1016 can operate from a 2.5V to 5.5V input voltage and is ideal for powering portable equipment that runs from a single cell lithium-Ion (Li+) battery. It can supply 600mA output current and can also run at 100% duty cycle for low dropout operation, extending battery life in portable system.

The APS1016 features a Power Saving Mode which reduces quiescent current to just 30μA and significantly improves efficiency at light load.

The APS1016 is offered in a low profile (1mm) 5-pin, SOT package, and is available in an adjustable version and fixed output voltage of 1.2V, 1.5V and 1.8V.
